QQs

Male qqqstone@163.com

11 year work experience | Position：Senior FrontEnd Engineer | City：Shanghai

Professional Summary

Core Framework: Proficient in React and its ecosystem, skilled in Vue and Angular (2+), with experience in large-scale application architecture.

3D Visualization & High Performance: Professional capability in WebGL application development, skilled in using vtk.js and Three.js for 3D model editing and visualization. Familiar with Unity3D development workflows and WebGL publishing. Proficient in integrating high-performance image processing algorithms using WebAssembly, significantly improving browser-side processing efficiency.

Front-end Engineering: Skilled in using Webpack and Vite, able to quickly implement them in new projects, configure project builds, and perform compilation optimization. Familiar with micro-frontend frameworks and Web Component API, possessing the ability to modularize project transformation.

Full-Stack Capability: Familiar with back-end development, skilled in using Express for microservices development, proficient in .NET OData API design and implementation, with experience in RESTful API development.

Cross-Platform Development: Extensive experience in React Native mobile application development, familiar with Electron desktop application development and hybrid communication solutions (including QWebChannel).

Deployment & DevOps: Familiar with Linux environments, skilled in configuring and managing web servers such as Apache, Tomcat, and Nginx. Familiar with the Azure ecosystem, proficient in deploying and managing App Service for hosting web applications, and implementing enterprise-level identity authentication and SSO integration based on Azure Active Directory B2C.

Employment History

Shandong Hugo Oral Care Group Co., Ltd. Senior Front-End Engineer 2025.07-Now

Content:

Owned end-to-end front-end delivery, leading project refactoring, technology selection, and sprint planning. Authored key technical documents like the "Micro-frontend Transformation Plan."

Managed the core VisualEngine project, handling the complete lifecycle from requirement analysis and technical design to development, testing, and deployment.

Collaborated closely with Algorithm, Backend, and QA teams to define interfaces and ensure seamless cross-departmental project execution.

Maintained and optimized front-end CI/CD pipelines, resolving build issues to ensure stability across development and production environments.

Achievement:

Resolved a critical, legacy Wasm project "single-point-of-failure" compilation crisis by rebuilding the packaging environment and creating automation scripts and documentation, transforming a "black box" into a maintainable asset.

Executed the urgent "Da Vinci Project Migration" within tight deadlines and provided remote support during a national holiday, ensuring zero-downtime and stable operation.

Boosted team productivity by systematically organizing 9 code repositories and 13 pipelines, and authoring 4 core development documents, reducing new member onboarding time by over 70%.

Enhanced cross-team efficiency by ~30% through deep technical collaboration with Algorithm and Endoscopy teams, providing early-stage architecture review and risk assessment.

Envista Imaging Dental Tech (Shanghai) Co., Ltd. Front-End Engineer 2019.06-2025.06

Content:

Led development and optimization of core projects for digital medical device platforms, enhancing customer diagnostic and treatment experiences.

Championed Agile development practices and GitFlow for robust code quality management.

Achievement:

Drove front-end technology stack selection and core feature development, achieving a first-time pass rate over 90% and zero hotfixes upon release, with 99% annual system stability.

Integrated WebAssembly to port C++ core algorithms to the browser, solving performance bottlenecks in processing large-scale medical data.

DS Information Technology Co., Ltd. Full Stack Engineer 2015.05-2019.05

Content:

Contributed to the development of emergency response information systems for the domestic market.

Optimized front-end and back-end performance and participated in project implementation.

Achievement:

As Team Lead, spearheaded the refactor of a legacy dispatch console system using Angular 4. The new system was successfully deployed across all 16 Shanghai bureaus, with customized versions for Baoshan and Hongkou.

Designed and implemented a company-wide unified portal, integrating all product lines with SSO, base data management, and RBAC. Independently developed organization, user, and fine-grained authorization modules.

Project List

Vincialign Web-based Tooth Arrangement

Development Engineer 2025.07-2025.09

Content:

Developed a Vue.js and Three.js based web application for orthodontists to visualize, measure, analyze, and simulate treatment plans using 3D STL tooth models. Features include multi-view analysis, tooth movement tracking, and automated report generation.

Achievement:

Resolved critical project handover challenges, including incomplete Wasm build documentation. Wrote CMake scripts to resolve dependencies, enabling successful integration. Refactored the module into a micro-application for reuse across projects, significantly reducing code duplication.

Smile Visualiser

Development Engineer 2024.11-2025.01

Content:

Built a React Native application using Expo for capturing patient facial photos, uploading them for AI-powered treatment outcome simulation, and displaying comparisons to facilitate doctor-patient communication.

Achievement:

Launched an innovative AI-driven product that significantly increased patient engagement and doubled communication efficiency for clinics.

Web Meshviewer

Development Engineer 2021.01-2022.12

Content:

Created a React and vtk.js single-page application for rendering 3D medical data models in the browser, providing detailed visualizations for oral diagnosis. Implemented user behavior tracking with Azure Application Insights.

Achievement:

Overcame browser performance limitations by offloading heavy computations to Web Workers and Wasm. Implemented chunked upload for large 3D models, optimizing both upload and multi-file download performance.

Asset Management System

Development Engineer 2019.08-2020.08

Content:

Led the development of an Angular and Express-based ERP system. Core features included full asset lifecycle management, maintenance scheduling, inventory, and automated email notifications.

Achievement:

Introduced a state machine model to standardize and automate complex workflows (prototype allocation, transfer, scrapping), improving approval efficiency by ~40%. The system became the core digital platform for company-wide asset management.

Dental DataService

Development Engineer 2019.06-2020.12

Content:

Developed a .NET OData API service to manage business object relationships and dynamic functional permissions, providing data query interfaces for desktop, web, and middleware applications.

Achievement:

Combined OData API with Entity Framework to ensure data security and flexibility, enabling high-efficiency data

exchange across enterprise systems.

Education

USST Master Optical Engineering 2012-2015

Research Focus: Precision instrumentation, with an emphasis on lighting systems, optical imaging, and image recognition.

Hangzhou Dianzi University Bachelor Optical Information Science and Technology 2007-2011

Core Coursework: Advanced Mathematics, General Physics, and Programming.

Certification

FCC Back End Development and APIs Certification
Azure Certification
Software Designer Certification
